DigiKhaato Business User Guide

Complete User Documentation (Current Implemented System)

Version: 1.0

Prepared On: May 7, 2026

Audience: Business users, end users, admins, managers, and stakeholders

Coverage: Loan Management + UdhaarBook + Jewellery ERP (current implemented scope)

Table of Contents

1. Introduction
2. Current Implemented Features
3. Detailed Form Documentation
4. Formula & Calculation Documentation
5. Workflow & Process Flow

11. Business Scenarios & Use Cases
12. FAQ & Troubleshooting

1. Introduction

1.1 Product Overview

DigiKhaato is a modular business operating platform that currently supports:

- **Loan Management** operations (borrowers, loans, field collections, overdue tracking, reports)
- **UdhaarBook / Customer Ledger** style lightweight account views
- **Jewellery ERP** operations (billing, inventory, customer master, karigar, outstanding, pledge loans)

1.2 Purpose of the System

The system is designed to digitize day-to-day business operations with auditability, role-based control, and real-time status visibility. It replaces manual registers, disconnected spreadsheets, and delayed reconciliations.

1.3 Target Users

- Shop owner / business admin
- Branch manager
- Cashier / salesperson / field collector
- Karigar manager
- Finance and audit users
- Super admin / platform owner

1.4 Business Value

- Faster daily operations with lower manual effort
- Better control over cashflow, stock, and receivables
- Standardized billing and formula-driven calculations
- Role-based permissions to reduce misuse
- Tenant-safe data segregation and operational traceability

2. Current Implemented Features

2.1 Module Status Snapshot

Module	Current Status	Business Usage Status
Authentication & Onboarding	Implemented	Live usable
Team / User Management	Implemented	Live usable
Borrower Management	Implemented	Live usable
Loan Management	Implemented	Live usable
Loan Collections	Implemented	Live usable
Account + Daily Collection	Implemented (core)	Usable with limited UX polish
Dashboard & Reports	Implemented	Live usable
Jewellery Billing	Implemented (major flows complete)	Live usable
Jewellery Inventory	Implemented with tracking views	Live usable
Jewellery Customers	Implemented	Live usable
Jewellery Karigar & Orders	Implemented (with edit/inactivate)	Live usable
Jewellery Outstanding	Implemented	Live usable
Jewellery Gold Pledge	Implemented (core flows)	Live usable
Multi-Branch / Notifications / Advanced Integrations	Partial / planned	Not fully active

2.2 Feature Guide by Business Area

2.2.1 Order Management (Jewellery Customer Orders + Karigar Workflow)

Purpose: Track custom orders and production handoff.

User benefit: Visibility from booking to delivery.

How to use:

1. Open `Jewellery > Karigar > Orders`.
2. Create a new order by selecting customer and entering order details.
3. Advance status through business stages.
4. Link issue/receipt vouchers for production tracking.

Expected behavior:

- Status transitions are controlled.
- Historical order trail remains visible.

Screenshot Placeholder: `Order list, status progression, advance-status modal`

2.2.2 Product Management (Jewellery Item Master)

Purpose: Maintain item-level stock with purity/weight metadata.

User benefit: Accurate billing and stock traceability.

How to use:

1. Open `Jewellery > Inventory > Item Master`.
2. Add item with metal, purity, gross/net/stone weights.
3. Set identifiers (SKU, barcode, HUID).
4. Track item status (`IN\_STOCK`, `SOLD`, etc.).

Expected behavior:

- Stock status updates automatically on invoice issue/cancel and transfer workflows.

Screenshot Placeholder: `Item list + item detail + status badges`

2.2.3 Supplier / Party Finance (Outstanding Ledger)

Purpose: Track party-level dual balances (cash + metal grams).

User benefit: Daily visibility of receivables and credits.

How to use:

1. Open `Jewellery > Outstanding`.
2. Review ageing buckets and party balances.
3. Open party drawer for movement history.
4. Post manual adjustments (authorized roles only).

Expected behavior:

- Balances are movement-driven and auto-recalculated.
- Last 50 movements are visible in detail.

Screenshot Placeholder: `Outstanding ageing cards + adjustment drawer`

2.2.4 CRM (Customer Management)

Purpose: Central customer profile for billing and relationship tracking.

User benefit: Faster invoice creation, better repeat-customer service.

How to use:

1. Open `Jewellery > Customers`.
2. Search by name/mobile.
3. Create or edit customer with GST/state/contact details.

Expected behavior:

- Customer can be selected directly in billing forms.

Screenshot Placeholder: `Customer form and search selector`

2.2.5 Insights & Reporting

Purpose: Daily operational and financial visibility.

Implemented reports include:

- Daily collections
- Loan/account summaries
- Overdue reporting
- Jewellery operational dashboards and report stubs

Expected behavior:

- Filters update results immediately.
- Lists support pagination.

2.2.6 Logistics (Transfers + Stock Take)

Purpose: Control inter-branch item movement and physical verification.

How to use:

1. Create transfer request.
2. Approve/dispatch/receive transfer.
3. Run stock-take session and complete with variance capture.

Expected behavior:

- Item status changes to `TRANSIT` then `IN\_STOCK` on receive.

2.2.7 Finance (Loan + Billing + Pledge)

Purpose: Manage lending and retail transaction flows.

Implemented sub-areas:

- Loan creation and repayment status
- Collection posting with automatic loan balance recalculation
- Jewellery invoice with GST, old-gold, and split payment
- Gold pledge disbursal/repayment core

2.2.8 Design Management

Purpose: Manage design catalog and related master data.

Current capability:

- Design CRUD pages
- Master categories/tax slab/number series support

2.2.9 User Management

Purpose: Control module access and operational permissions.

Current capability:

- Team member create/edit/activate/deactivate
- Module roles per user with branch scoping
- Super admin tenant administration views

2.2.10 Central Services

Purpose: Shared identity, audit-ready status updates, and integration-ready architecture.

Current capability:

- JWT authentication with refresh behavior
- Role and module-based gating
- Tenant isolation patterns across modules

3. Detailed Form Documentation

> Note: This section documents the major operational forms currently wired and used in production workflows.

3.1 Authentication & Setup Forms

Form	Field	Purpose	Type	Required	Validation / Accepted Values	Dependencies / Behavior
Login	Mobile Number	User sign-in identity	Text	Yes	Valid mobile format	Must match registered account
Login	Password	Authentication credential	Password	Yes	Non-empty	Incorrect values show login failure
Signup	Full Name	User display name	Text	Yes	Non-empty	Stored in user profile
Signup	Mobile Number	Unique user ID	Text	Yes	Unique mobile	Duplicate mobile blocked
Signup	Password	Initial credential	Password	Yes	Policy check	Must be confirmed where applicable
Onboarding	Business Name	Tenant/business identity	Text	Yes	Non-empty	Used across module branding
Onboarding	Area Name	Locality/branch context	Text	Optional	Free text	Operational display use
Onboarding	Currency	Money display convention	Dropdown	Yes	Configured options	Impacts display only

3.2 Borrower & Loan Forms

Form	Field	Purpose	Type	Required	Validation	Auto-calculation / Notes
Borrower Create/Edit	Name	Borrower identity	Text	Yes	Non-empty	Used across all linked loans
Borrower Create/Edit	Mobile	Contact and search key	Text	Yes	Format checks	Supports quick search
Borrower Create/Edit	Assignment	Collector assignment	Dropdown	Optional/Role based	Valid user only	Drives collector visibility rules
Loan Create/Edit	Borrower	Link loan to borrower	Selector	Yes	Must exist	Cannot mismatch later collections
Loan Create/Edit	Principal	Base loan amount	Number	Yes	Positive	Used in total/EMI calculations
Loan Create/Edit	Interest Rate %	Flat interest rate	Number	Optional	Numeric, >=0	Defaults to 0 if empty
Loan Create/Edit	Tenure Days	Repayment duration	Number	Optional	Positive integer	If missing, daily EMI stays 0
Loan Create/Edit	Start Date	Loan start date	Date	Yes	Valid date	Used in due/alert logic

3.3 Collection Forms

	Field	Purpose	Type	Required	Validation	Behavior
Entry (Loan)	Loan	Select loan to collect	Selector	Yes	Must match borrower	Borrower-loan mismatch blocked
Entry (Loan)	Borrower	Borrower reference	Selector	Yes	Assigned scope checks for collector	Collector can only collect assigned
Entry (Loan)	Amount Paid	Payment value	Number	Yes	>0 recommended	Impacts loan paid/outstanding reca
Entry (Loan)	Payment Mode	Instrument channel	Dropdown	Yes	Enum values	Cash / UPI variants etc
Entry (Loan)	Date	Collection date	Date	Yes	Valid date	Drives reporting day-wise
Entry (Loan)	Notes / Reference	Operational trace	Text	Optional	Length bounds	Useful for reconciliation
ction (Account)	Account	Target account	Selector	Yes	Must exist	Updates account amount_paid/out
ction (Account)	Payment	Received amount	Number	Yes	Positive	Auto-closes account at zero outsta
ction (Account)	Date	Transaction date	Date	Yes	Valid date	Reporting and history index

3.4 Jewellery Billing Forms

3.4.1 Invoice Header Form

	Purpose	Type	Required	Validation / Accepted Values	Dependencies
	Invoice mode	Dropdown	Yes	`TAX_INVOICE`, `ESTIMATE`, `CASH_MEMO`, `NON_GST`, `CREDIT_NOTE`	Credit note
	Buyer identity	Search-select	Optional for walk-in	Valid customer id	B2B behavior
y	GST split basis	Dropdown	Yes	Valid state codes	Different states
	Bill-level discount	Number	Optional	>=0	Discount percentage
	Internal/external notes	Textarea	Optional	Length limited	Appears in invoice

3.4.2 Invoice Line Form

	Purpose	Type	Required	Validation / Rules	Auto-fill / Auto-calc
	Select stock item	Search input	Optional (manual line allowed)	Search by SKU/barcode/HUID	Fills metal/purity/weight
	Item description	Textarea	Yes for final line completeness	Non-empty for valid line	Auto-seeded from item
	Tax code	Text	Optional/Defaulted	Alphanumeric	Defaults from form
	Product classification	Text	Yes for itemized lines	Uppercase code	Auto-filled from item
e Weight	Weight basis	Numeric	Net mandatory for complete line	Decimal weight input	Used in value and GST
	Pricing base	Numeric	Yes	>=0	Pulled from live rates
	Labour model	Dropdown	Yes	`PER_GRAM`, `PCT_METAL`, `PER_PIECE`	Chooses making formula
	Labour factor	Numeric	Yes	>=0	Used by selected making
	Wastage factor	Numeric	Optional	>=0	Converted to wastage
	Compliance service fee	Numeric	Optional	>=0	18% hallmark GST applied
	Non-metal value	Numeric	Optional	>=0	Added to line total
	Metal GST	Numeric	Optional	Usually 3%	Split CGST/SGST or IGST
y chip)	Hallmark identifier	Read-only chip	Auto when item selected	Uppercase/format controlled in inventory	Persisted on invoice line

3.4.3 Payment Split Form

Field	Purpose	Type	Required	Validation	Behavior
Mode	Payment channel	Dropdown	Yes	Enum modes	Multiple rows allowed
Amount	Paid amount	Number	Yes	>0 for valid row	Sum contributes to paid amount
Reference	Trace ID	Text	Optional	Free text	Useful for UPI/card/bank trace

3.4.4 Old Gold Form

Field	Purpose	Type	Required	Validation	Auto-calc
Metal Code	Exchange metal type	Text	Yes	e.g., GOLD	Grouping/reporting reference
Gross Weight	Received old-gold weight	Number	Yes	>0	Used in pure-gram formula
Tested Purity	Assay purity	Number	Yes	>0	`pure_grams = gross * purity / 99.9`
Buy Rate per gram	Buyback valuation	Number	Yes	>0	`deduction_value = pure_grams * buy_rate`
Description	Item note	Text	Optional	Free text	Audit note

3.5 Jewellery Inventory Forms

	Mandatory	Rules / Validation
ty, Gross Wt, Net Wt, HUID, Hallmark Status	Metal/Purity/Gross/Net required	Weight format (up to 4 decimals), HUID format `[A-Z0-9]{6}` when provided, un

	Mandatory	Rules / Validation
ch, To Branch, Item Lines	To + lines required	Status workflow controlled (request/approve/dispatch/receive)
ch context	Minimal required	Completion computes variances

3.6 Jewellery Karigar & Order Forms

	Key Fields	Mandatory	Validation Highlights
Edit	Name, Mobile, PAN, Wastage, Labour, Active Toggle	Name + mobile required	Mobile: 10 digits (`+91` normalized), PAN pattern `AAAAA9`
Create	Customer, Description, Expected Delivery	Customer + description required	Status transitions controlled by workflow
Status	New Status	Required	Must follow allowed transition path
cher	Karigar, Metal, Purity, Gross Wt, Tunch %, Date	Required	Numeric checks on weight/tunch
	Karigar, Issue, Gross/Net Wt, Purity %, Date	Required	Purity range checks, reconciliation outputs

3.7 Jewellery Gold Pledge Forms

Form	Key Fields	Mandatory	Validation / Behavior
ew Pledge Loan	Customer, Scheme, Principal, Tenure, Loan Date, Pledge Items	Required	Principal >0, tenure constraints, item-level weight/rate validation
payment	Date, Principal Paid, Interest Paid, Mode	Required	Non-negative payment amounts, updates loan balance timeline

3.8 Admin & Access Forms

Form	Purpose	Validation
Team Member Create/Edit	User provisioning	Required identity fields, role assignment checks
Module Access Review (Super Admin)	Approve/reject module request	Reject reason minimum length
Jewellery Feature Flags	Enable/disable features	Admin-permission gated
Jewellery Lock Period	Billing period control	Date/business rule validation

4. Formula & Calculation Documentation

4.1 Loan Management Formulas

Field	Purpose	Inputs	Output	Explanation
Amount	Add interest to principal	`principal`, `interest_rate`	`total_amount`	`interest = principal * (rate/100)` and `total = principal + interest`
	Daily repayment expectation	`total_amount`, `tenure_days`	`daily_emi`	`daily_emi = total / tenure_days` (if tenure exists)
Balance	Current due	`total_amount`, `paid_amount`	`outstanding_balance`	`max(total - paid, 0)`
Indicator	Collection performance proxy	`daily_emi`, elapsed days, paid_amount	integer missed-days	Calculates expected paid by date and compares s

Example:

- Principal: 100,000
- Interest rate: 12% flat
- Total: 112,000
- Tenure: 112 days
- Daily EMI: 1,000

4.2 Loan Collection Status Logic

Logic	Rule
Paid	Amount >= current outstanding

Logic	Rule
Partial	Amount > 0 but < current outstanding
Missed	Amount <= 0

4.3 Account + Daily Collection Logic

Formula Name	Purpose	Rule
Current Outstanding Update	Keep account balance current	On new daily collection: `amount_paid += payment`, `outstanding = max(amount_given - amount_paid, 0)`
Current Auto Close	Mark fully repaid accounts	If outstanding reaches 0, status becomes `closed`

4.4 Jewellery Billing Formulas

Name	Purpose	Inputs	Output	Core Rule
Base Metal Value	Base metal valuation	`net_wt`, `rate_per_gram`	`metal_value`	`metal_value = net_wt * rate_per_gram`
Making Charge (Per Gram)	Labour cost	`net_wt`, `making_rate`	`making_charge`	`net_wt * making_rate`
Making Charge (% Metal)	Labour cost	`metal_value`, `making_rate`	`making_charge`	`metal_value * making_rate/100`
Flat Making Charge (Per Piece)	Flat labour	`making_rate`	`making_charge`	`making_rate`
Wastage Amount	Wastage valuation	`net_wt`, `wastage_pct`, `rate_per_gram`	`wastage_amount`	`(net_wt * wastage_pct/100) * rate_per_gram`
GST on Metal Part	GST on metal part	`line_metal_part`, `gst_rate_pct`	`gst_amount`	`line_metal_part * gst_rate/100`
GST on Service	GST on hallmark service	`hallmarking_fee`	`hallmark_gst_amount`	`hallmarking_fee * 18%`
Discount Allocation	Fair bill-level discount split	bill discount + line taxable weights	`discount_allocated` per line	Proportional allocation by line taxable amount
Round Off	Currency neat total	`gross_total`	`round_off`	`round(gross_total) - gross_total`
Payable Amount	Payable amount	all totals	`total_amount`	`gross_total + round_off`

4.5 Old Gold Exchange Formula

Formula	Purpose
`pure_grams = gross_wt * tested_purity / 99.9`	Convert gross old-gold into pure equivalent
`deduction_value = pure_grams * buy_rate_per_gram`	Reduce amount payable by exchange value

4.6 Outstanding / Party Ledger Logic

Rule	Explanation
Balance update	Every movement updates amount and metal balances atomically
Overdue flag	Based on `last_txn_date` threshold (90+ days bucket)
Ageing buckets	`0-30`, `31-60`, `61-90`, `90+` derived from age days

4.7 Gold Pledge Formulas (Implemented Core)

Formula	Purpose
LTV-based valuation usage	Controls principal vs collateral value
Interest methods (simple/compound/daily/flat)	Scheme-based loan due computation
Repayment split	Principal + interest settlement tracking

5. Workflow & Process Flow

5.1 End-to-End Loan Business Flow

User Login

- > Onboarding / Profile Setup
- > Borrower Creation
- > Loan Creation
- > Daily Collections Posting
- > Loan Balance Auto Recalculation
- > Overdue Monitoring
- > Reports / Review

5.2 End-to-End Jewellery Billing Flow

Customer Selection

- > Invoice Type Selection
- > Item Search/Scan + Auto-fill
- > Line Calculation (rate, making, wastage, GST)
- > Optional Old-Gold Deduction
- > Payment Split Entry
- > Save Draft OR Issue Invoice
- > Item Status Update (IN_STOCK -> SOLD)
- > Optional Print/PDF/Share/E-Invoice Reference

5.3 Credit Note / Reversal Flow

Issued Invoice Selected

- > Create Credit Note with Reference Invoice
- > Select return lines
- > Issue Credit Note
- > Item Status Reversal (SOLD -> IN_STOCK)

5.4 Inventory Transfer Flow

Transfer Request

- > Approve
- > Dispatch (item status -> TRANSIT)
- > Receive (item status -> IN_STOCK + branch update)

5.5 Outstanding Adjustment Flow

Outstanding List

- > Party Detail Drawer
- > Manual Adjustment Form (authorized roles)
- > Movement posted atomically
- > Balance refresh + history update

5.6 Approval / Rejection / Cancel Behavior

Flow Type	Current Behavior
Loan/Borrower edit restrictions	Collector is blocked from mutation paths
Invoice cancel	Allowed with role check and reason, subject to lock-period rules
Draft deletion	Draft invoices only
Module access request rejection	Requires reason
Status transitions (orders/transfers)	Controlled by allowed transitions only

5.7 Cross-Module Dependencies

Source Module	Depends On	Why
Collections	Loans/Borrowers	Payment must map to a valid loan-borrower pair
Dashboard	Loans + Collections + Accounts	KPI aggregation
Jewellery Billing	Inventory + Customers + Rates	Accurate line pricing and stock movement
Outstanding	Billing/Movements	Receivable visibility is movement-driven
Pledge	Customers + Scheme + Pledge Items	Loan disbursal and repayment lifecycle

6. Validation Rules

6.1 Frontend Validations (Examples)

Area	Rule	Error Condition	Typical Message
Login	Mobile + password required	Empty values	"Required" / login failure
Karigar	Mobile must be 10-digit (`+91` supported)	Invalid pattern	"Enter a valid 10-digit mobile"
Karigar	PAN pattern check	Wrong format	"Invalid PAN format"
Inventory Item	Gross/Net weight required	Missing or bad decimals	"Enter a valid weight"
Gold Pledge	Principal must be positive	<=0	"Principal is required" / "Must be > 0"
Outstanding Adjustment	Notes minimum length	too short	"Notes must be at least 5 characters"
Invoice	At least one complete line	no valid line	"Add at least one line"

6.2 Backend Validations

Area	Rule	Error Condition	Behavior
Collections	Loan-borrower consistency	Loan borrower != selected borrower	Reject request
Collections	Collector assignment enforcement	Collector collecting unassigned borrower	Reject request
Billing	Credit note reference mandatory	Credit note without reference	Reject request
Billing	Reference invoice status check	Reference not issued	Reject request
Billing	Issue only from draft	Non-draft issue call	Reject request
Inventory	HUID format and uniqueness	Invalid format or duplicate HUID	Reject request
Karigar	Mobile/PAN normalization rules	Invalid values	Reject request
Lock Period	Billing blocked in locked periods	Transaction date in locked range	Reject request

6.3 Business Validations

Business Rule	Outcome
Item must be in correct stock state for issue/cancel flows	Prevents stock corruption
Discount affects GST recalculation	Prevents tax inconsistency
Balance can never go below zero in loan/account outstanding	Prevents negative due anomalies
Role/permission checks before sensitive actions	Prevents unauthorized cancellations/adjustments

6.4 API and Permission Validation Examples

Endpoint Type	Validation
Protected APIs	JWT required
Jewellery APIs	Module feature + role permissions required
Team management APIs	Admin/super-admin only for create/delete/toggle
Outstanding adjustments	Adjustment permission required

7. User Roles & Permissions

7.1 Primary Roles

Role	Typical Scope
Super Admin	Tenant/platform control

Role	Typical Scope
Admin / Owner	Full module operations
Manager	Supervisory operational control
Cashier / Salesperson	Day-to-day billing/sales operations
Collector	Field collections with assignment limits
Karigar Manager	Karigar/order-related controls
Pledge Officer	Gold pledge operations
Auditor	Read/export access for review
Borrower	Own portal views only

7.2 Key Allowed vs Restricted Actions

Role	Allowed (examples)	Restricted (examples)
Collector	Create collection entries for assigned borrowers	Borrower/loan mutation outside scope
Cashier	Create bills, view inventory, rate read	High-privilege admin controls
Manager	Billing cancel, inventory edits, reporting	Platform tenant-level actions
Auditor	View/export reports	Transaction mutation
Super Admin	Tenant user lifecycle actions	Day-level shop operations by default workflow

7.3 Tenant & Branch Behavior

- Users are tenant-scoped.
- Jewellery roles are module-scoped and can be branch-scoped.
- Branch matching in permission resolution supports branch-specific operations.

8. API & System Behavior (User Perspective)

8.1 What Happens After User Actions

User Action	System Behavior (Non-technical)
Save a loan collection	Loan outstanding is updated automatically
Edit a collection	Old totals are corrected and balance is recalculated
Issue a jewellery invoice	Voucher number is assigned and linked items become sold
Cancel invoice	Invoice status changes; stock reversal logic applies
Generate IRN reference	Simulated IRN data is attached and compliance warning applies
Add old-gold row	Deduction is applied to payable balance
Post outstanding adjustment	Movement is logged and party balance updates instantly

8.2 Notifications / Auto Updates

- KPI screens refresh via API calls and cache invalidations after write actions.
- Billing, collections, and outstanding updates are reflected in subsequent list/detail fetches.
- Some reminder/notification integrations are partially wired and expanding in roadmap.

8.3 Retry & Failure Experience

- If an operation fails validation, the user sees an inline or API message.

- Failed saves do not partially commit financial records in critical transactional paths.
- Users should correct values and retry.

9. Known Limitations / Pending Areas

9.1 Current Limitations

Area	Limitation
Reports UI	Some reports are functional but need richer export/table UX
Advanced notifications	Full omnichannel delivery orchestration still maturing
Multi-branch advanced controls	Core support exists; deeper governance workflows pending
E-invoice	Current IRN generation is reference/simulated, not full GSP legal filing
Placeholder routes	Some auxiliary screens are placeholders or partially wired
Offline-first collections	Planned; not fully implemented

9.2 Temporary Workarounds

- Use existing list filters and detail screens for operational reconciliation.
- For compliance-sensitive e-invoice use cases, follow manual/legal filing flow until GSP integration is complete.
- Use role-based process controls (manager/admin review) for exceptional transactions.

10. Next Phase Planning

10.1 Near-Term Enhancements

Theme	Planned Enhancement
Usability	Better pickers/search-first forms, stronger report UI, export improvements
Controls	Deeper module-isolated access governance and team tooling
Compliance	Legal e-invoice GSP integration, richer GST workflows
Automation	Improved reminders, approval chains, and lock-period governance
Analytics	Profitability, collector/karigar productivity, branch analytics
Reliability	Offline queue + retry sync, background processing hardening

10.2 Jewellery-Specific Roadmap Highlights

- Final polish on partially wired areas (if any remain in rollout branch)
- Expanded accounts/ledger depth
- Advanced inventory tagging (barcode/RFID) and print templates
- Stronger multi-branch + audit workflows

10.3 Platform-Wide Roadmap

- Throttling, observability, and operational scale controls
- Better tenant onboarding and module activation UX
- More robust integrations and lifecycle automation

11. Business Scenarios & Use Cases

11.1 Scenario A: Field Collector Daily Routine

1. Collector logs in.
2. Opens collections due list.
3. Records payments for assigned borrowers.
4. System updates balances instantly.
5. Manager reviews daily summary at end of day.

Best Practice: Always verify borrower identity before posting collection.

11.2 Scenario B: Jewellery Counter Billing

1. Salesperson starts new invoice.
2. Selects customer and adds item via search/scan.
3. Reviews auto-calculated charges and GST.
4. Adds split payment and old-gold deduction if applicable.
5. Saves draft for manager review or issues directly based on authority.

Common Mistake to Avoid: Issuing invoice before verifying item, purity, and rate.

11.3 Scenario C: Month-End Outstanding Cleanup

1. Manager opens outstanding module.
2. Filters by ageing bucket (90+ first).
3. Reviews party movement trail.
4. Posts authorized manual adjustments with clear notes.
5. Exports/communicates reconciled positions.

Best Practice: Never adjust without audit note and role approval.

11.4 Scenario D: Karigar Lifecycle

1. Create or update karigar profile.
2. Mark inactive if no longer assignable.
3. Continue processing historical issue/receipt records.
4. Avoid duplicate karigar creation by searching first.

12. FAQ & Troubleshooting

12.1 Common Questions

Q1: Why can I see records but cannot edit them?

A: Your role likely has read-only permissions for that feature.

Q2: Why does a credit note ask for reference invoice?

A: Credit notes are legally and operationally tied to an issued invoice.

Q3: Why did my invoice not issue?

A: Typical reasons are incomplete lines, stock-state mismatch, lock-period restriction, or permission limits.

Q4: Why is a party shown overdue?

A: Current ageing is based on last activity date bucket logic.

Q5: Why can't I assign a karigar in issue form?

A: Inactive karigars are filtered from active assignment dropdowns.

12.2 Troubleshooting Steps

Problem	Recommended Action
Validation errors on save	Check required fields, format constraints, and dependent selections
Permission denied message	Confirm your role and branch/module assignment with admin
Totals look incorrect	Recheck rates, making mode, discount inputs, and line completeness
Outstanding mismatch concern	Open movement detail and verify latest adjustments/payments
Item not found in billing	Use search with SKU/barcode/HUID and verify item is in correct status

12.3 Escalation Guidance

- **Operational query:** Raise with branch manager.
- **Access issue:** Raise with system admin.
- **Compliance uncertainty (GST/e-invoice):** Escalate to finance/compliance lead before proceeding.

Appendix A: Screen / Screenshot Checklist (To Capture)

1. Login screen
2. Onboarding screen
3. Borrower list + loan create
4. Collections entry + history
5. Dashboard KPI view
6. Jewellery billing form (line items)
7. Invoice detail (IRN panel + QR)
8. Inventory item list + item create
9. Karigar list + edit drawer
10. Outstanding page + detail drawer
11. Gold pledge create + repayment
12. Team management + module access screens

Appendix B: Key Status Enums (Business View)

Domain	Main Status Values
Loan	Active, Closed, Overdue
Collection	Paid, Partial, Missed
Item	In Stock, Sold, Issued, Transit, Written Off
Invoice	Draft, Issued, Cancelled
Transfer	Requested, Approved, In Transit, Received, Rejected
Karigar Order	Booked, Metal Issued, WIP, Karigar Received, QC, Hallmarked, Ready, Delivered, Closed, Cancelled
Pledge Loan	Active, Renewed, Closed, Auctioned, Loss
